COVID Exit Strategy (www.covidexitstrategy.org), a non-partisan group of public health and crisis experts, has been tracking the progress states have made towards meeting the CDC recommended benchmarks states should reach before reopening their economies. As of the week ending on June 26th, only six states were meeting these metrics, earning a “Green” rating. Currently, Pennsylvania is failing half of the benchmarks, and is rated “Red” by COVID Exit Strategy due to rising case numbers and low per capita diagnostic testing capacity.

**CDC Benchmark: a 14-day decline in influenza-like illness**

The CDC recommends that states report a 14-day decline in influenza-like illness (“ILI”) before lifting restrictions. Pennsylvania **HAS MET** this benchmark. ILI numbers for outpatient and Emergency Room (“ER”) visits are reported to the CDC weekly. Pennsylvania reported a decrease in ILI from 279 to 268 between the week ending June 6th and the week ending June 20th.
**CDC Benchmark: declining COVID+**

The CDC recommends a state show a 14-day decline in reported cases of COVID-19 before reopening. Pennsylvania has **NOT MET** this benchmark. COVID+ cases have been increasing in the state over the last 14 days.

**CDC Benchmark: testing**

The CDC recommends a state show a downward trajectory for the percentage of COVID-19 tests that are positive before reopening. Pennsylvania has **NOT MET** this benchmark. Test positivity has been flat in the state over the last 14 days.

**CDC Benchmark: hospital capacity**

The CDC recommends a state have sufficient hospital capacity to treat all patients without crisis care (20% capacity available over last 7 days). Pennsylvania **HAS MET** this benchmark. The highest reported occupancy in the last week was 71% for inpatient and 65% for ICUs.

**Recommendations**

Pennsylvania is currently failing 2 out of 4 CDC benchmarks that PennPIRG has been tracking, indicating that COVID-19 has been spreading in the community without effective containment. PennPIRG recommends that the state maintain all current restrictions related to COVID-19, and take additional measures to improve containment. These measures could include: prohibiting indoor seating at restaurants and closing all non-essential businesses in current COVID-19 hot-spots.
